

How to measure for your Insert Replacements

Ready to come in and begin the process with us? Great, glad to be working with you. Before you do come in though, it is a good idea to have the sizes of your windows (it doesn't need to be perfect, just close enough to give a quick estimate). We'll send one of our pros out when the time comes to order to get the exact number. It is fairly easy to measure for insert windows.

Step 1

Measure the width of the unit as shown above labeled A.

Step 2

Measure the height of the unit as shown above labeled B.

Step 3

Count the light cuts (the grills, mullions, etc).

That's it. See that was easy. Now just give a call to (908) 636-2026 and schedule an appointment with one of our professionals to discuss options such as what type of window would work best for your home and most importantly your budget.
